

Learning paradigms

Learning theories are usually divided into several [paradigms](#) which represent different perspectives on the learning process. [Theories](#) within the same paradigm share the same point of view. Currently, the most accepted learning paradigms are behaviorism, cognitivism, constructivism, connectivism and humanism but there are others as well.

Here we will refer to the following learning paradigms and related learning and instructional design theories:

- [Behaviorism](#)
- [Cognitivism](#)
- [Humanism](#)
- [Constructivism](#)
- [Connectivism](#)
- [Other Learning Theories](#)

A more detailed description can be found by clicking on the name of any of given paradigms, and a brief explanation of each of them follows:

- [Behaviorism](#):
 - Time line: Since 1910s
 - What is learning: Development of desired behavior
 - Control locus: Environment
 - Learner role: Passive
 - Learning process: Support of desired or punishing undesired behavior
 - Critics: Ignores learner and his mental processes, depends exclusively on overt behavior

Instructional design theories

We will also refer to some instructional design principles:

- [Cognitive Apprenticeship](#)

Other related theories

Some theories that are not directly orientated on explaining of the learning process, but are also worth mentioning can be found here:

- [Gestalt Theory](#) (Wertheimer)
- [Theory of Cognitive Development](#) (Piaget)
- [Communities of Practice](#) (Lave and Wenger)
