

Invitational Learning

General

Invitational theory was firstly introduced by William Purkey in 1978 in his book “Inviting School Success” and describes an **educational framework of learning/teaching relationships based on human value, responsibility and abilities**.

What is invitational learning

Invitational theory starts from assumptions that each individual analyzes situations according to his past experiences and observations (self-concept theory) and that he develops behaviors based on his perceptions of the world. People are inherently valuable

Learning is observed in social context, where learners must be invited by the teacher to develop their potentials. The invitation here is described by Purkey as “a summary of messages, verbal and nonverbal, formal and informal, that are sent to students with the intention of affirming for them that they are responsible, able, and valuable.”

Invitational theory suggests individuals should be encouraged to make meaningful choices through interaction with teacher.

What is the practical meaning of invitational learning?
