Predrag Pale has strong interest in applying ICT to education since early 1990-ies. He is experimenting[1] with usage of web, multimedia, copmuter based assesmet and other methods of using ICT in his educational work both at the University of Zagreb and elsewhere. He regularly speaks[2] about the need to rethink education in view of new technologies and globalization.

[1]

some insight in his work can be acquired by visiting some of the subjects he teaches:

- Communication technologies for measurement and control systems
- Multimedia principles
- Software design for measurement and control systems

[2]

most of his public presentations can be found at his university home page
