

The Coherence Principle

Theory

The coherence principle (also called *seductive details*¹⁾ effect) claims that extraneous material that may be interesting or motivating but is irrelevant for learning objectives generally wastes learning resources and **hinders learning of important material**. This assumption is grounded in the fact that human cognitive resources are limited. Still, [cognitive load theory](#) predicts this effect will only occur if the cognitive load imposed by important learning material is high enough.²⁾

Practice

Seductive details can appear in virtually any format, but often as

- text, or
- external links.

Research status

A number of studies on the effect of seductive details have demonstrated:

- **negative effects** on learning of important material³⁾
- **lack of negative effects** on learning of important material.⁴⁾

Surprisingly, a recent study even found an large **increase in learning** due to seductive details.⁵⁾ Possible explanations offered for this phenomenon are:

- low cognitive load imposed by instructional material (**free cognitive resources**) in combination with
 - increase in **motivation** and cognitive engagement caused by interesting seductive details
 - **enhanced mental model** due to additional information which was successfully processed
